Take the guesswork out of homecare with TextCare home monitoring

When providing care services to someone who is living alone, it can be difficult to determine the frequency and type of support that will be the most beneficial, particularly when they are having trouble communicating their needs. TextCare enables homecare providers to discreetly monitor activities within the home so that a clear picture of wellbeing and capabilities can be obtained.

Monitoring data is transferred by TextCare to a private online portal, where 24-hour reports can be easily interpreted and used as an assessment tool. This allows care providers to adapt and plan their services to meet changing needs over time. It can also be an effective means for helping families to decide when it is time to consider moving on to a higher level of care for their loved one.

Manufactured in the UK

TextCare®

Supporting safe, independent living, for longer

Movement
Are they moving around as usual?

Temperature
Is their home too hot or cold?

Visitors
Has a carer visited & how long did they stay?

Sound
Is the TV or radio on or anyone speaking?

Light
Have the lights been switched on or off?

Doors
Have they wandered outside?

Falls
Have they fallen over and need help?

TextCare enables care providers to see whether normal daily routines are being followed and give peace of mind to families. If anything out of the ordinary happens, such as a detected fall or a door opening during the night, a warning alarm text message will be sent to up to eight mobile phones to facilitate a faster response to emergencies.

- Low cost and unobtrusive
- No cameras or listening devices
- Easy to install and set-up
- No phone line or internet required
